
FOREWORD

This is the sixth issue of Crops Statistics of the Philippines, an annual publication of the Bureau of Agricultural Statistics (BAS). As in the previous issues, this report presents annual production statistics of 21 major crops and 20 minor priority crops with national and regional levels of disaggregation. These crops are classified into Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root crops. The reference period is 2003 to 2008.

Production statistics of major varieties for banana and mango are also included in this report.

This report was prepared by the Crops Statistics Division (CSD) of the BAS. It serves as a ready reference for various stakeholders in the agricultural sector. The production statistics are presented in the order of the above crop classification. Each classification is preceded by a brief description of the trends of area, production and yield and the major factors affecting these trends and the major producing regions.

The BAS continuously pursues the improvement of the delivery of its products and services. Hence, it welcomes comments and suggestions from the readers for further improvement of this report.

ROMEO S. RECIDÉ

EXPLANATORY NOTES

Scope and Coverage

Crop production statistics are generated for all regions and provinces except Batanes. Quarterly crop surveys are focused on the following forty seven (47) major and priority crops:

	<u>MAJOR CROPS</u>	<u>PRIORITY CROPS</u>
CEREALS	Palay and corn	
FRUIT CROPS	Banana, calamansi, mango, pineapple	Durian, mandarin, mangosteen, lanzones, papaya, rambutan, orange, watermelon, tamarind
NON-FOOD & INDUSTRIAL CROPS	Abaca, coconut, coffee, rubber, sugarcane tobacco	Cacao, cashew, cotton
VEGETABLES, ROOTCROPS & TUBERS	Cabbage, camote, cassava, onion, eggplant, garlic, mungo, peanut, tomato	Asparagus, broccoli, carrots cauliflower, gabi, ginger, gourd, habitchuelas, lettuce, okra, pechay-chinese, pechay-native ubi, white potato

Sampling Methodology

The sampling design of Palay and Corn Production Survey (PCPS) was based on the results of 1991 Census of Agriculture (CAF). The survey domain was the province. It employ's a replicated two-stage stratified sampling design. The barangay was the primary sampling unit (psu), which was selected using a probability proportional to size (pps) scheme. The farming household served as the secondary sampling unit (ssu), which was selected systematically.

A non-probability survey was employed for *other crops*, crops other than palay and corn. A "5 x 5" design was used in the selection of samples with the province as the domain. The top five (5) producing municipalities were chosen from each province. From each of these municipalities, five (5) sample farmers were selected as respondents.

In this two-stage design, the municipalities served as the primary sampling units (psu), and farm households as the ultimate sampling units (usu).

Data Collection

For cereals, data collection is done quarterly during the first twelve (12) days of the month after the reference quarter. For other crops, quarterly data collection is conducted simultaneously with the monthly Farm Prices Survey (FPS) in the last ten (10) days of February, May, August and November.

Each round of the PCPS generates the following: (1) Final estimate of production for the immediate past quarter of the current survey round; (2) Forecast production for the current quarter based on standing crop; and (3) Forecast production for the next quarter based on planting intentions of farmers.

Data Review and Analysis

Data review and analysis are conducted quarterly to ascertain the accuracy of the data collected from probability and non-probability surveys. These activities start at the Provincial Operations Center (POC) after data processing using prescribed review materials. All provincial estimates undergo further data review at the regional level. All validated regional and provincial estimates are brought to the Central Office for final review. The BAS Director presides over the National Data Review, which is participated in by the Assistant Director and Division Chiefs, Regional Agricultural Statistics Officer (RASOs) and commodity specialists.

Concepts and Definitions

The following concepts and definitions are used in the generation of statistics for crops.

- | | |
|-------------------------------|---|
| Area Harvested | - The actual area from which harvests are realized. This excludes crop area totally damaged. It maybe smaller than area planted. In crop statistics, this applies to temporary crops. |
| Area Planted | - The actual physical area planted to a permanent crop. This generally applies to area reported for permanent fruit crops. |
| Bearing Trees/Hills/Vines | - Trees/hills/vines where harvesting has been made ithe past but may or may not have borne fruits during the reference period due to cyclical production pattern of the crop. Hills applies to banana. |
| Effective Crop Area Harvested | - The actual area from which harvests are realized which is counted as many times as it was planted and harvested to same crops or different crops during the reference period. This concept applies to the harvest area reported for temporary crops such as rice, corn, vegetables, rootcrops and tubers and temporary fruit crops. |

- High Yielding Variety - An improved cultivated variety with significantly higher Yield and better quality under specific environment and improved farming conditions and practices than the traditional seed varieties being used; or any agricultural crop variety that can equal or exceed the yield of the current commercially grown variety in a particular locality. HYV may be locally or foreign bred.
- Industrial Crops - Crops which are used as inputs to other industries. Examples are: rubber, castor beans, abaca and oil palm.
- Irrigated Palay - Palay which needs standing water for its normal growth. It is one that requires irrigation water made available through artificial means (gravity, force, power pumps, etc.) It is not confined to lowlands but also to higher places where paddies are built for planting palay.
- Major Crops - The top 21 crops including palay and corn which collectively account for about 95 percent of the total agricultural crop production. These include coconut, sugarcane, banana, pineapple, coffee, mango, tobacco, abaca, peanut, mongo, cassava, camote, tomato, garlic, onion, cabbage, eggplant, calamansi and rubber.
- Minor Crops - All the crops other than the major crops monitored by the Bureau. This group accounts for about 5% of the total crop production.
- Non-Food Crops - Crops other than for food consumption. These are crops grown for their aesthetic values such as ornamental plants and cutflowers. There also includes agriculture-derived products such as rice hay and coconut leaves.
- Permanent/Perennial Crops - Crops which occupy the land for a long period of time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive, i.e., have already borne fruits or capable of bearing fruits. Examples are: avocado, coffee, coconut and other fruit trees.
- Priority Crops - The identified national banner crops and various regional priority crops of the Key Commercial Crops Development Program (KCCDP), High Value Commercial Crops (HVCC) Program and now the Key Commodity Road Maps of the Department of Agriculture, which are being developed because of their industrial and commercial potentials. Examples are: cashew, durian, highland vegetables, papaya, lanzones, ginger, etc.

- | | |
|-----------------|---|
| Production | - The quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc. |
| Rainfed Palay | - Consists of lowland and upland palay. Lowland palay requires standing water for its normal growth but depends only on rainfall. Paddies were built to hold water. Upland palay does not require standing water for its normal growth and is usually grown on soil usually dry on the surface. It also depends only on rainfall. Both are not necessarily confined to lowlands but also to higher places or hillsides. |
| Root Crops | - Crops with well developed underground edible roots. They are classified into tubers and roots. Roots which are more starchy and rich in carbohydrates include gabi, ubi and white potato. Tubers include beets, radish, carrots and turnips. |
| Temporary Crops | - Crops which are grown seasonally and which growing cycle is less than one year and which must be sown and planted again for production after each harvest. |
| Vegetable Crops | - Mostly temporary crops which are either classified agronomically as such or based on purpose for which they are used, like jackfruit which on their young stage, are classified as vegetables. |
| White Corn | - Corn kernels of white color with no more than two percent (2%) of other colors. |
| Yellow Corn | - Yellow corn kernels with not more than two percent (2%) of other colors. A slight tinge of other colors, other than yellow, shall not affect their qualification as yellow corn. |
| Yield | - An indicator of productivity derived by dividing total production by the area harvested for temporary crops or by the total bearing trees among permanent crops. Unit is in metric ton per hectare or kilograms per bearing tree. |

II. REGIONAL STATISTICS

A. CEREALS

HIGHLIGHTS

PALAY

In 2008, palay production reached 16.82 million mt or 3.5 percent more than the 2007 level of 16.24 million mt. The top producing regions were Central Luzon, Western Visayas, Cagayan Valley and Ilocos Region with a combined output of 8.90 million mt or 53 percent of the country's total palay production for the year (Figure 1). Total area harvested from these regions represented 50 percent of the national total of 4.46 million hectares (Figure 2). Yield of palay in Ilocos Region, Cagayan Valley, Central Luzon, CALABARZON, Zamboanga Peninsula, Northern Mindanao and Davao Region surpassed the national average of 3.77 mt per hectare (Table 2.1).

In irrigated areas, palay production was 12.56 million mt. Central Luzon posted the highest production level at 2.71 million mt followed by Cagayan Valley at 1.87 million mt (Table 2.2). These regions accounted for 21 percent and 15 percent, respectively, of the total irrigated palay output in the country (Figure 3).

In rainfed areas, palay production was 4.26 million mt. The top producer was Western Visayas at 877.39 thousand mt which accounted for 21 percent of the national rainfed palay production. This was followed by Ilocos Region at 578 thousand mt and shared 13 percent to total rainfed palay production (Figure 4).

HIGHLIGHTS

CORN

Total production of corn in 2008 was 6.93 million mt. The major producing regions were Cagayan Valley, Northern Mindanao and SOCCSKSARGEN. The combined output from these regions represented 53 percent of the country's total corn production (Figure 1). Total area harvested in these regions accounted for 45 percent of the national level of 2.66 million hectares (Figure 2). In terms of yield, CAR, Ilocos Region, Cagayan Valley and Central Luzon posted average yields ranging from 3.73 mt to 4.88 mt per hectare (Table 2.4).

White corn production was highest in ARMM at 593.12 thousand mt, or 26 percent of the total white corn production of the country. Northern Mindanao followed with 381.58 thousand mt or 17 percent share to the national total. On the other hand, yellow corn production was highest in Cagayan Valley at 1.41 million mt, or 30 percent of the total yellow corn production for the year. SOCCSKSARGEN followed with 820.47 thousand mt or 18 percent to total production (Tables 2.5-2.6).

In terms of yield, Ilocos Region registered the highest at 3.18 mt per hectare for white corn and 5.43 mt per hectare for yellow corn (Tables 2.5-2.6).

B. FRUIT CROPS

HIGHLIGHTS

BANANA

Production steadily increased annually by an average of 10 percent from 2003-2008. Similarly, area planted expanded annually at the rate of 2 percent. The number of bearing hills grew by an average of 7 percent. In 2008, banana production was 8,688 thousand mt which was 16 percent higher than the 7,484 thousand mt in 2007 (Figure 1). Area harvested and number of bearing hills increased in SOCCSKSARGEN, Davao Region, Northern Mindanao and MIMAROPA. Bigger fruits and bunches due to sufficient water were noted in Zamboanga Peninsula, Central Visayas and ARMM.

The major producing regions of Davao Region, SOCCSKSARGEN, and Northern Mindanao had a combined share of 72 percent to national production in 2008 (Figure 2). This surpassed their contribution of 67 percent in 2007 due to increases in area planted and number of bearing hills in Northern Mindanao. This region retained its second position after Davao Region as top banana producer. Banana production in Northern Mindanao shot up to 1,631 thousand mt in 2008 which was 75 percent above its 2007 level of 933 thousand mt (Table 3.1).

Banana, Cavendish. This variety comprised about half of the country's total banana production. From 2003 to 2008, production of cavendish variety grew by an average annual rate of 18 percent. This could be explained by the 10 percent expansion in area planted and the 17 percent increase in bearing hills. In 2008, production of cavendish variety was estimated at 4,329 thousand mt which was 30 percent higher from the 3,323 thousand mt in 2007 (Table 3.1.1).

Davao Region remained as the largest producer of cavendish variety with an estimated production of 2,746 thousand mt or 63 percent to the national total cavendish variety output in 2008. Also, the region had the largest area planted to Cavendish variety at 45,655 hectares.

Northern Mindanao, the second top producer, posted the highest growth of 161 percent from 413 thousand mt in 2007 to 1,077 thousand mt in 2008. The growth was attributed to the additional number of bearing hills in commercial farms and expansion in area planted. The region had an estimated area planted of 15,545 hectares.

Banana, Lacatan. Production grew at an annual rate of 6 percent during the 2003-2008 period. Area planted and bearing hills also increased annually by 1 percent and 5 percent, respectively. During the same period, lacatan production in SOCCSKSARGEN, the top producer, posted an annual growth rate of 12 percent. The area planted to lacatan variety in Davao Region recorded an average growth of 7 percent from 2007 to 2008 (Table 3.1.2).

Lacatan variety represented 10 percent of the country's total banana production in 2008. SOCCSKSARGEN sustained its position as the top lacatan producer and shared 26 percent to total lacatan production in 2008.

Banana, Saba. For the period 2003-2008, production grew at an annual rate of 5 percent; area planted about half percent and bearing hills by 2 percent. In 2008, production was 2,527 thousand mt which was 6 percent above the 2007 volume. This represented 29 percent of the total banana production. Area planted to saba variety was 183,139 hectares, less than 1 percent higher than the area in 2007. Davao Region remained as the top producer with 22 percent share to national total saba variety production. SOCCSKSARGEN, Northern Mindanao and Cagayan Valley, the other major saba variety producers, had a combined share of 33 percent to the total saba variety production in 2008 (Table 3.1.3).

HIGHLIGHTS

CALAMANSI

In 2003-2008 production showed an average yearly increase of 2 percent; area planted increased by about 1 percent; and number of bearing trees by 2 percent. In 2008, production reached 199.68 thousand mt which was about 1 percent lower than its 2007 level of 202 thousand mt (Figure 1). Excessive rains in MIMAROPA, Cagayan Valley and SOCCSKSARGEN, low fertilizer usage and shifting to durian in Davao Region contributed to lower output. From 2007 to 2008, area planted and number of bearing trees grew by 2 and about 2 percent, respectively.

About 59 percent of the country's total calamansi output was produced in MIMAROPA which remained the country's top calamansi producing region (Figure 2), despite the decrease in the region's production in 2008 when output at 118.24 thousand mt was 2 percent lower than in 2007 (Table 3.2).

HIGHLIGHTS

MANGO

Over the last six years, 2003-2008, production slowed down annually by 3 percent. Area planted during the period expanded by an average of 4 percent. The annual increment in the number of bearing trees was 4 percent. In 2008, the country produced 884 thousand mt of mango, 14 percent lower than the 1,024 thousand mt in 2007 (Figure 1). This resulted from the adverse effects of typhoon Frank, rains during flowering stage, less flower induction, toppling down of trees due to typhoon Cosme, and the attack of anthracnose.

Ilocos Region remained the top producer with a contribution of 43 percent to the national output (Figure 2). This region posted a production of 383 thousand mt which was 14 percent lower than the 2007 production of 445 thousand mt. In terms of area planted, Central Luzon continued as the leading region with area planted of 33,320 hectares or 18 percent to the country's area cultivated to mango (Table 3.6).

Mango, Carabao. Carabao variety production exhibited an erratic trend during the 2003-2008 periods posting a drop of 3 percent annually. This was so, despite the expansion on area planted at an annual rate of 5 percent and increase on the number of bearing trees by 5 percent. In 2008, production of carabao variety was 712.41 thousand mt which indicated a drop of 14 percent from the 828.41 thousand mt in 2007. This variety comprised 81 percent to the country's total mango production. Area planted and number of bearing trees recorded respective increases of 2 percent and about 1 percent from 2007 to 2008 (Table 3.6.1).

Ilocos Region was the top producer in 2008 with 331.63 thousand mt or 47 percent of the total carabao variety production.

Central Luzon had the largest area planted at 24,446 hectares. This represented 17 percent of the country's area planted to carabao mango.

HIGHLIGHTS

PINEAPPLE

Production and area planted from 2003 to 2008 exhibited annual growth rates of 5 percent and 4 percent, respectively. In 2008, the country produced 2,209 thousand mt, 10 percent more than the 2,017 thousand mt in 2007 (Figure 1). This was attributed to area expansion in multinational corporate farms.

Northern Mindanao and SOCCSKSARGEN, the major pineapple producers, both accounted for 87 percent of the country's pineapple production. These regions contributed 76 percent to the country's total area devoted to pineapple (Figure 2).

HIGHLIGHTS

ABACA

In 2008, abaca production increased by 2.93 percent to 68.39 thousand mt from 66.44 thousand mt in 2007 (Figure 1). The gain in output was attributed to the recovery of abaca farms in Bicol Region which were previously hit by typhoons Milenyo and Reming and the satisfactory price of abaca fibers in Davao Region. Area planted to abaca also increased by 2.51 percent annually from 121.48 thousand hectares in 2003 to 137.52 thousand hectares in 2008.

Eastern Visayas remained as the top abaca producer in 2008 with 23.78 thousand mt or 34 percent of the country's total production. The other major producers were Bicol Region with 18.36 thousand mt or 27 percent share; and Davao Region with 10.25 thousand mt or 15 percent contribution to the country's production (Figure 2).

HIGHLIGHTS

CACAO

Cacao production decreased continuously by an annual average rate of 1.99 percent from 2003 to 2008 (Figure 1). Corresponding annual decreases were noted in area planted by 2.11 percent on average; number of bearing trees, 0.77 percent; and yield per bearing tree, 1.23 percent. In 2008, production was 5.15 thousand mt, 1.69 percent lower than the 5.24 thousand mt in 2007. The declining output was due to shifting to high value crops like banana in Davao del Sur, the top producing province.

The other top producing region in 2008 were Davao Region with 66 percent of the national output; Northern Mindanao with a share of 11 percent; Caraga, 4 percent; and Eastern Visayas and Zamboanga Peninsula with shares of 3 percent each (Figure 2).

HIGHLIGHTS

CASHEW

Between 2003 to 2008, cashew production was highest in 2004. It declined annually by an average of 0.99 percent, from 117 thousand mt in 2004 to 112 thousand mt in 2008 (Figure 1). Area planted to cashew decreased at the rate of 0.23 percent annually from 27.84 thousand hectares in 2003 to 27.52 thousand hectares in 2008. The number of bearing trees was highest in 2005 at 3.52 million trees but decreased annually by 0.30 percent to 3.49 million trees in 2008. MIMAROPA, the top producer of cashew, contributed 91.82 percent to the country's production in 2008 (Figure 2).

HIGHLIGHTS

COCONUT

Coconut production in 2008 was 15.32 million mt and recorded a 3.14 percent increase from 14.85 million mt in 2007 (Figure 1). Average yield also increased to 45.14 kilograms per bearing tree in 2008 from 43.85 kilograms per bearing tree in 2007 (Table 4.4a). These increases were about brought by the recovery of coconut trees from the devastating effects of 2006 typhoons.

The top coconut producer was Davao Region which contributed 17 percent to the national production in 2008. The other major producers were Eastern Visayas, Zamboanga Peninsula and Northern Mindanao with shares of more than 11 percent each to the national production (Figure 2).

HIGHLIGHTS

COFFEE

Throughout the period 2003-2008, coffee production decreased by an average annual rate of 1.74 percent (Figure 1). In 2008, coffee production was estimated at 97.43 thousand mt which was 0.46 percent lower than the 2007 production of 97.88 thousand mt. The declining production was due to the rejuvenation of farms in Davao Region, particularly, in Davao City. There was also shifting of coffee to banana and rubber production in SOCCSKSARGEN. Area planted and number of bearing trees contracted annually by 1.33 percent and 1.29 percent, respectively (Figure 1).

SOCCSKSARGEN was the top producer in 2008 and contributed 27.74 percent to the country's coffee production. The second top producer was Davao Region with 24.70 percent share to total production (Figure 2).

Of the coffee varieties, Robusta had the highest share of 72 percent to total production of all varieties (Figure 3).

HIGHLIGHTS

COTTON

The 0.74 thousand mt production in 2008 was 45.77 percent lower than the 1.36 thousand mt in 2007 (Figure 1). The decline in output was attributed to the frequent rainfall that adversely affected the production areas in SOCCSKSARGEN, the top producer. The region contributed 80 percent to total production (Figure 2) and 44.46 percent to the total area harvested in the country (Table 4.6). Over the period 2003 to 2008, production and area of cotton peaked in 2005 at 5.17 thousand mt and 5.96 thousand hectares. From 2006 to 2008 production and area dropped significantly (Figure 1).

HIGHLIGHTS

RUBBER

The sustained high price of natural rubber; increased number of tapped trees; and support from the Local Government Units (LGUs) motivated tappings in the major producing regions of Zamboanga Peninsula and SOCCSKSARGEN. As a result, production grew by an average of 8.45 percent annually from 273.98 thousand mt in 2003 to 411.04 thousand mt in 2008 (Figure 1). Area planted also increased by 8.89 percent and number of mature trees grew by 7.82 percent.

In 2008, the combined output of the top two producing regions of Zamboanga Peninsula and SOCCSKSARGEN comprised 82 percent of the national rubber production (Figure 2). Their combined area and number of mature trees accounted for 69.32 percent and 80.80 percent of the national totals, respectively (Table 4.7 and Table 4.7a).

HIGHLIGHTS

SUGARCANE

Sugarcane production grew by 19.64 percent, from 22.24 million mt in 2007 to 26.60 million mt in 2008 (Figure 1). The increase was attributed to the expansion in area harvested by 3.93 percent, from 382.96 thousand hectares in 2007 to 397.99 thousand hectares in 2008. Average yield per hectare also increased from 58.06 mt to 66.84 mt during the same period (Table 4.8).

In 2008, Western Visayas was the largest producer sharing 13.77 million mt or 52 percent to total sugarcane production (Figure 2). Also, the region had also the largest area harvested of 192.58 thousand hectares contributing 48.39 percent to the national total (Table 4.8).

HIGHLIGHTS

TOBACCO

Tobacco production exhibited a downward trend at an annual rate of 9.30 percent from 52.90 thousand mt in 2003 to 32.47 thousand mt in 2008 (Figure 1). Area planted dropped by 11.87 percent annually from 41.72 thousand hectares in 2003 to 22.18 thousand hectares in 2008. The decrease was attributed to crop shifting to corn, pepper, eggplant and ampalaya in Ilocos Region.

The most preferred tobacco variety was Virginia tobacco contributing 47 percent to the national output while Native variety shared 31 percent (Figure 2).

In 2008, Ilocos region remained as the top tobacco producer and contributed 72 percent to the national production (Figure 3).

HIGHLIGHTS

CABBAGE

In 2008, production reached 128.9 thousand mt or an increase of 4.4 percent from the 123.4 thousand mt in 2007. From 2003 to 2006, cabbage production reached more than 90 thousand mt only. The large volume of production in 2007 and 2008 was largely due to expansion in areas. (Figure 1).

The Cordillera Administrative Region (CAR) was consistently the top producer of cabbage with 103 thousand mt or almost 80 percent of the country's total production in 2008 (Figure 2). In the Visayas, Central Visayas led in cabbage production with 6.5 thousand mt. In Mindanao, the top producers were Northern Mindanao with 5.6 thousand mt and Davao Region with 4.9 thousand mt (Table 5.3).

HIGHLIGHTS

CAMOTE

Camote production fluctuated with an upward trend from 547 thousand mt in 2003 to 574 thousand mt in 2007. It slid to 573 thousand mt in 2008 or 0.2 percent below its 2007 level. Area harvested also fluctuated (Figure 1). However, yield continuously increased from 4.47 mt per hectare in 2003 to 4.92 mt per hectare in 2008 registering an average annual growth rate of 3.0 percent.

Eastern Visayas was the top producer in 2008 with 118.1 thousand mt or 20.62 percent of the national production (Figure 2). The second largest producer was Bicol Region with 95.8 thousand mt, followed by CARAGA with 62.4 thousand mt (Table 5.4). Their respective shares to the national cabbage output were 16.72 percent and 10.89 percent (Figure 2).

HIGHLIGHTS

CASSAVA

Cassava production grew at an annual rate of 3.7 percent from 2003 to 2008, from 1.62 million mt to 1.94 million mt (Figure 1). The output gain was traced to the improved peace and order situation in Lanao Sur, Basilan and Sulu. Also, there was expansion in contract growing scheme of San Miguel Corporation, La Tondeña, BMEG, Phil Agro and other cassava chip millers in Bukidnon and Misamis provinces. Average yield had continuously increased from 7.75 mt per hectare in 2003 to 9.17 mt per hectare in 2008 with an average annual growth of 3.14 percent.

ARMM with 1.0 million mt of production remained as the top producer (Table 5.6). It accounted for 51.69 percent of the country's total production in 2008 (Figure 2). Northern Mindanao ranked second with share of almost 18 percent and Bicol Region with share of 5.81 percent.

HIGHLIGHTS

EGGPLANT

Eggplant production grew by 4.5 percent annually from 2003 to 2007. In 2008, production went down to 199.6 thousand mt indicating a 5 percent decline from the 210.2 thousand mt in 2007 (Figure 1). Production dropped as a result of heavy rains brought by typhoon Cosme in Pangasinan during the second quarter of 2008. Area harvested fluctuated from 2003 to 2008. Yield continuously increased from 8.43 mt per hectare in 2003 to 9.72 mt per hectare in 2007. Yield went down to 9.37 mt per hectare in 2008, or 3.6 percent lower than the 2007 level (Table 5.8).

Ilocos remained the top producer of eggplant with 73.1 thousand mt in 2008 which accounted for 36.46 percent of total production in the country in 2008 (Figure 2). CALABARZON trailed second with an output of 32.2 thousand mt or about 16 percent to the national output. Cagayan Valley followed with 19.3 thousand mt or 9.64 percent of the total.

HIGHLIGHTS

GARLIC

Garlic production decreased continuously at an annual average rate of 6.98 percent from 2002 to 2007. However, it went up to 11.4 thousand mt in 2008 or 0.6 percent higher than 11.3 thousand mt in 2007 (Figure 1). Due to favorable weather, yield improved from 2.92 mt per hectare in 2007 to 2.95 mt per hectare in 2008.

Ilocos was the leading garlic producer sharing 72.57 percent of the country's total production in 2008 (Figure 2). MIMAROPA came next with 2.0 thousand mt (Table 5.10) or about 18 percent share to total production.

HIGHLIGHTS

MONGO

Mongo production rose to 29.6 thousand mt in 2008 from 29.1 thousand mt or 1.9 percent increase from its 2007 level. Previous to this, production fluctuated from 2003 to 2006. Area harvested followed the fluctuating trend of production (Figure 1). Yield leveled at 0.74 mt from 2003 to 2008.

Ilocos remained the largest producer with 11.34 thousand mt or 38.30 percent of the country's total production in 2008. Cagayan Valley ranked second largest producer with 4.96 thousand mt or 16.74 percent of the total production; followed by Western Visayas, 3.73 thousand mt or 12.58 percent share; and ARMM, 3.0 thousand mt production or 10.15 percent share to the total production (Table 5.15 and Figure 2).

HIGHLIGHTS

ONION

Onion production in 2008 went down to 128.9 thousand mt or 12 percent lower than the 146.1 thousand mt in 2007. The factors that affected production were delayed planting, early onset of rainfall in the first quarter and the spread of leaf curl disease that resulted to smaller bulb produced in Pangasinan and Nueva Ecija. Similarly, area harvested in 2008 went down to 14.6 thousand hectares or 8.2 percent lower than the 15.9 thousand hectares in 2007 (Figure 1). Yield also decreased from 9.86 to 8.84 mt per hectare or at the average annual rate of 2.1 percent from 2003 to 2008 (Table 5.17).

Central Luzon, MIMAROPA, and Ilocos were still the country's top onion producers in 2008 (Figure 2).

HIGHLIGHTS

PEANUT

Peanut production in 2008 dropped to 30.2 thousand mt from 31.2 thousand mt in 2007. Likewise, area harvested decreased to 27.7 thousand hectares in 2008 from 28.3 thousand hectares in 2007 (Figure 1). The reductions were attributed to crop shifting to yellow corn, mungo, string beans and watermelon in Pangasinan, La Union and Cagayan in the second quarter of 2008.

Thirty nine (39) percent of the peanut produced in the country was from the Ilocos region (Figure 2). The other top producing regions were Cagayan Valley (4.1 thousand mt), Northern Mindanao (2.9 thousand mt), Western Visayas (2.3 thousand mt) and Central Luzon (1.9 thousand mt) (Table 5.18).

HIGHLIGHTS

TOMATO

Tomato production moved upward from 150 thousand mt in 2003 to 196 thousand mt in 2008 or an average annual growth rate of 5.6 percent. Area increased from 16.8 thousand hectares in 2003 to 17.6 thousand hectares in 2008 with an annual growth rate of 1.0 percent (Figure 1). Average yield recorded an annual growth rate of 4.5 percent from 8.9 mt per hectare in 2003 to 11 mt per hectare in 2008 (Table 5.21).

Ilocos was the consistent top producer with 62 thousand mt production in 2008 or 31.53 percent of the country's total tomato production. The other top producing regions and their shares to total production were Northern Mindanao (25.77 percent), Central Luzon (10.63 percent) and CALABARZON (8.25 percent).

HIGHLIGHTS

PRIORITY and OTHER VEGETABLES

Figures 1 and 2 show the trends of production of priority and other vegetables.

Chinese pechay production increased from 35 thousand mt in 2003 to 50 thousand mt in 2008 registering an annual growth rate of 8 percent (Table 5.19). Likewise, broccoli production increased from 5.3 thousand mt in 2003 to 9.8 thousand mt in 2008 or an annual growth rate of 9.4 percent (Table 5.2). The increases were attributed to favorable weather condition, improved planting and pests control technologies, and with increasing demands and government interventions.

On the other hand, gourd production decreased from 128 thousand mt in 2003 to 104 thousand mt in 2008 or at an annual declining rate of 4.1 percent (Table 5.12). Asparagus and ubi productions also decreased from 15.2 and 27.9 thousand mt in 2003 to 11.9 and 24.2 thousand mt in 2008, respectively (Table 5.1 & 5.22). Typhoons, heavy rainfall, flash floods and other calamities caused production and area harvested to fluctuate.

Production and area harvested of other vegetables such as gabi, cauliflower, habitchuelas, lettuce, native pechay and okra increased from 2003 to 2008.
